"Our Guarantee"

All our plants are guaranteed to be true to name, top quality, healthy and free of insects or disease. If you should have any problems or concerns please contact us.

Trees and shrubs are guaranteed for one (1) year from date of purchase and for the original purchase value.

Our guarantee applies to trees or shrubs that fail to grow after being properly planted and cared for in a recommended area. Guarantee excludes damage done by animals, chemicals, vandalism or nursery stock planted in above ground containers.

The original receipt and nursery stock must be presented prior to or at time of adjustment.

For more information on returns of plant material, please call us at **403.346.5613.**

We are also offering a 5 year warranty with purchase of MYKE. See www.premiertech.com/myke and ask our Specialists for details.

What's in store for

THE YEAR OF THE DRAGON!

By Alfred Prins

For all the rain we had in spring and the early summer of 2011, the sunnier weather we had in August, the drier conditions we had in September and October, we did get a great harvest. Those conditions, along with the relatively mild winter we've had so far, indicate that the permanent plants in our gardens should come through the winter well this year.

This should give us a great start to this gardening year. With all the wonderful new seeds, bulbs, and plants we have coming this spring, we're very excited for the season that will soon be upon us! Again, we have Central Alberta's widest selection of garden seeds. While there are still no genetically engineered seeds available, we do have an amazing selection of heritage, heirloom, and organically grown seeds. There's also a line of Cook's Choice seeds with a recipe on every packet.

New this year is a selection of compact veggies, ideal for container growing on your patio or step. Included in the vegetable seeds are numerous unique novelty varieties for those who want to grow something unusual in their vegetable garden! New from McKenzie are multi-variety seed pellets, that come with two or more colors of petunia combined in each pellet, for "instant" mixed pots.

Begonia tubers and spring bulbs have arrived, and all other flower bulbs will be here by mid March. Back are all the old favorites, and a few new additions; like the giant tree lily "Lavon", growing 3-4 ft tall the first year, 5-6 ft the second year, and 6-8 ft the third year. It produces huge fragrant blooms in soft yellow with red centers. Also new: a couple of varieties of striped dahlias called "Pippi", and "Santander", and a new burgundy martagon lily called "Russian Morning". These will

definitely add An exciting new look to our summer gardens.

In the greenhouse we also have some exciting new items: the Bacopa Calypso series provides even larger blooms on the ever popular trailing plant. The Mosaic series of Coleus gives us three bright new foliage colors for shade gardens. In the Calibrachos we have added the new "Double Lavender," and "Double Ruby," from Proven Winners. The all new Osteospermum "3-D Double Purple" is fully double and stays open even in cloudy weather! The Balconita Pansy provides three new colors of trailing pansies for frost tolerant hanging baskets for spring and fall. Last year we introduced Petunia "Black Velvet", this year there is another called "Black Satin".

Even more exciting, a whole new color of petunia this year called "Pink Lemonade" a soft yellow with pink highlights. It should look stunning blended with black petunias. We also have a new red thunbergia called "Serengeti Dark Red," this would look great combined with the yellow thunbergias!

Our bedding plants will carry a new lime colored petunia "Debonaire Lime Green" that should blend very nicely with rose, lavender or blue colors. Heritage tomatoes have proven very popular the last few years, and we have added a new black variety called "Indigo Rose", and an early bush type called "Northern Delight"

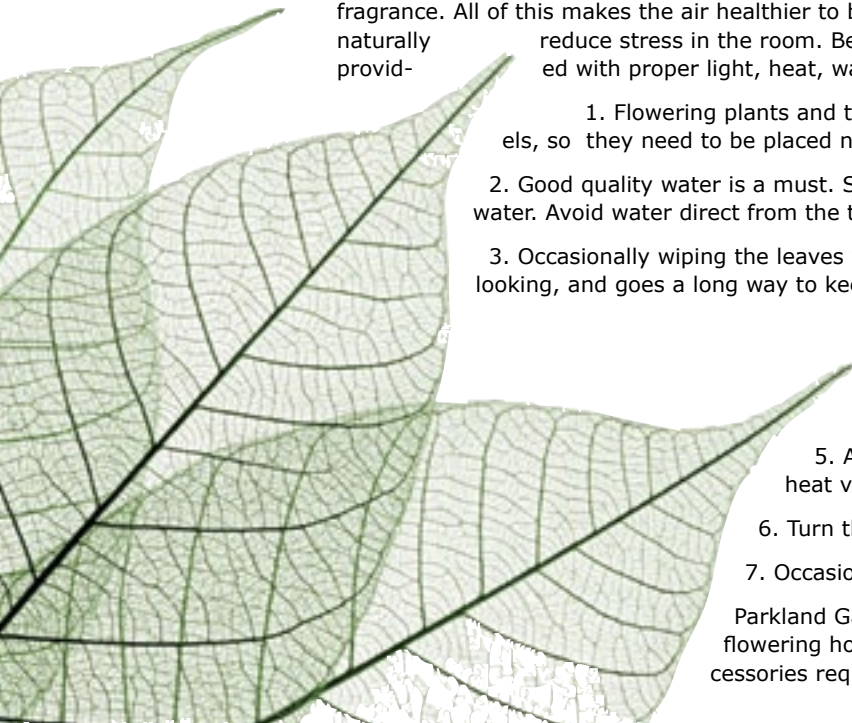

These are only the "highlights" of what's new in the greenhouse this spring. There are numerous more for you to discover when you visit our garden center!

Even more exciting, a whole new color of petunia this year called "Pink Lemonade" a soft yellow with pink highlights. It should look stunning blended with black petunias. We also have a new red thunbergia called "Serengeti Dark Red," this would look great combined with the yellow thunbergias!

Mother Nature's AIR PURIFIERS

Tropical houseplants provide so many natural benefits to our indoor living environments, no home or office should be without them. They range from small window sill plants, to lush hanging pots of cascading foliage, to tall floor specimens, and also mixed decorative containers of assorted colorful plants. They clean the air, provide enhanced humidity and sometimes fragrance. All of this makes the air healthier to breathe. The general "life-presence" they exude tends to naturally reduce stress in the room. Because all plants are living things, they must always be provided with proper light, heat, water, and nutrition. Here are some helpful hints.

1. Flowering plants and those with colorful foliage generally require high light levels, so they need to be placed near the window or other similar light source.
2. Good quality water is a must. Strive to use rain water, melted snow, bottled or distilled water. Avoid water direct from the tap, as it generally contains too many adverse minerals.
3. Occasionally wiping the leaves with a damp cloth will keep leaves cleaner and healthier looking, and goes a long way to keeping unwanted insect pests at bay.
4. A mild feeding of tropical plant fertilizer at every watering, such as Plant Prod 20-20-20, keeps them well nourished. A teaspoon per gallon of water at every watering works very well.
5. Avoid cold drafts near doors, and also hot dry drafts near heat vents.
6. Turn them from time to time to encourage balanced growth.
7. Occasional light trimming will encourage bushier growth.

Parkland Garden Center carries a full range of tropical foliage and flowering houseplants plus all the decorative containers, soil, and accessories required to successfully grow beautiful houseplants.

OUR SPECIALISTS

Alfred Prins

A certified horticulturist with over 26 years of experience, a master on roses and a radio personality.

Trudy Watt

Bachelor of Applied Horticulture, Certification in Floral Design and is a Canadian Accredited Floral Designer with over 20 years experience.

Serena Zwicker

Horticulture diploma with a major in landscape design. Serena has been with us for over 6 years providing quality landscape design for our customers.

Christine Cornelius

Bachelor of Applied Horticulture, who enjoys all the new technology. The tree and shrub expert, Christine has been with us 19 years!

The Skinny Trees

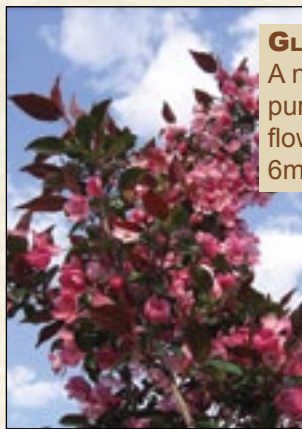

MT. SENTINEL ASPEN
New form of Swedish aspen that is resistant to bronze leaf disease. Same narrow habit.
10m x 2m
Picture not available

WEeping BLUE SPRUCE
A excellent accent tree. Silvery blue in colour on it's weeping branches.
5m x 4m

DREAMWEAVER CRABAPPLE
Has bright pink flowers and bronze leaves. Narrow in form the plant makes a good accent.
3m x 1m

GLADIATOR CRABAPPLE
A narrow form of crabapple with purple foliage and deep pink flowers. Purple ornamental fruit.
6m x 3m

DAKOTA PINNACLE BIRCH
A heat, drought, and salt tolerance makes this an excellent hardy durable tree.
7m x 2.5m

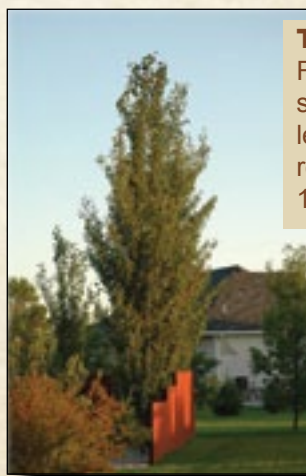

PYRAMIDAL MT. ASH
Narrow form of the traditional Mt. Ash. Intolerant of wet soils, this is excellent in dry locations.
7m x 2m

COLUMNAR SCOTS PINE
A narrow pine with twisted blue needles. Hardy like it's parent.
6m x 1.2m
Picture not available

SUTHERLAND CARAGANA
Narrow multi stem tree that is extremely drought tolerant. Yellow flowers in the spring.
5m x 1.5m

TOWER POPLAR
Fast growing tree with silver growth under the leaves. Disease resistant.
10m x 2.5m

ARNOLD SENTINEL AUSTRIAN PINE
Excellent columnar form of pine. Dark long needles makes this pine an accent plant.
6m x 2m

SKYBOUND CEDAR
A sport of Brandon Cedar with the classic form of pyramidal cedar. Hardy because it is crossed with Siberian cedar.
5m x 1.25m

Caring for the Birds

This topic is near and dear to most people's hearts, birds bring color, song and entertainment to our lives.

But while feeding them is very important it is also equally important to clean the feeder they are frequenting on a regular basis. It is recommended that you wash the feeder with a soap and water solution on a regular schedule so that disease and mold does not grow in the seed. When the feeder is clean, it is important to replace the seed with high quality dust free birdseed that Parkland Garden recommends and carries in stock. Feeders with seed are not the only ones that need cleaning, however, hummingbirds are also prevalent here in Central Alberta. Parkland carries a wide variety of supplies for you to encourage and enjoy hummingbirds from feeders, nectars and cleaning tools.

Please see us for all your bird watching requirements.

This leisure time activity can bring beauty and joy to your life!

Landscape Design & Consultation Checklist

Parkland Nurseries & Garden Center Ltd. offers landscape designing and consulting services to help homeowners develop their landscapes. Here are a few points to consider and information that will be required by the landscape designer when booking an appointment.

- **Accurate Measurements** – A Site Survey Plan will address most of the required dimensions. A blueprint of the house is also helpful. A sketch with the dimensions or a scaled drawing on graph paper will also work. Indicate the direction with a North arrow.
- **Photographs** – Will help to show and remind you and the designer of certain elements that would affect the design solutions.
- **User Wants and Needs List** – Consider what these are and write them down. Vegetable garden, hot tub, fire pit, shed, play structure, dog run, privacy concerns, unsightly elements to hide, views to enhance and maintenance requirements etc.
- **Plants** – If there are certain plants that you would like in your landscaping or more importantly ones you do not want, indicate these.

Having this information ready for your appointment with the Landscape Designer will ensure a successful result for your landscape design solutions. Please call 403-346-5613 for information or to book an appointment.

Vegetable Gardening and Design

As we go forward in this era of sustainability people are re-discovering the joy of growing their own vegetables. However, many think this means only large, in-ground gardens and lots of work. Nothing could be further from the truth. There are many different styles and sizes of gardens now. From growing your vegetables right in with the flowers, all the way to raised beds. Gardening has become fashionable again; as the taste, and value, of growing your own has created a new look in yard design. No longer are gardens hidden from the rest of the yard. We have moved them into the forefront, and by using containers we can grow veggies anywhere. Create your own and not only feel better, this is also a great way to save money on the grocery bill.

Going Green Indoors

Environmental awareness and “going green” is becoming more and more important in today’s world, and when these concerns are mentioned, most people think first of the great outdoors. However, our indoor environment is equally important. Adding some plants to your interior décor provides many benefits. First, they soften the décor and create a more relaxing atmosphere – a very real benefit after a busy day at work. It also provides the therapeutic effects of gardening through the long winter months when gardening is not possible outdoors. Increased humidity, less carbon dioxide, more oxygen and reduce air pollutants are added benefits to make breathing easier. A few large floor plants, some hanging

plants, or even some smaller flowering plants on the window sill can add a real breath of fresh air to any room. Remember, those with colorful foliage, or flowering plants, generally require bright light to full sun, while most green foliage plants will tolerate lower light levels. However, dark corners or rooms

without windows are not ideal for even low-light plants. Equally important is the water quality, even more so than quantity and frequency of watering. We recommend rain water, melted snow, or distilled water.

If insects appear, we recommend bringing in a sample for accurate diagnosis, but most often the safe and healthy control will consist of wiping, cleaning, hand-picking, or trimming and disposal of the affected parts.

Do not use household soaps as they are often damaging to the plants.

Drop in soon and often to view our ever-changing selection of indoor plants and our garden-safe line of plant care products and let us help you enhance your environment!

*Come check out our amazing **HENRI** selection!*

EDIBLE LANDSCAPING

Food plays a central role in everyone's life. Homegrown food is to be considered more nutritious than commercially produced food. Edible landscaping can also help reduce pest problems, enhance soil fertility, while providing you with homegrown fruits, vegetables and herbs. Destructive bugs will have a harder time finding individual plants than they do a whole row in a garden. Plants that are grown specifically to be cut down and returned to the soil as fertilizer will enhance soil fertility. Also, edible landscaping involves beds that are not completely replanted each year, therefore would not be tilled every year like a garden would be. Repeated tilling breaks down the soil structure.

The mind-set of most people is that flowers have to be in a specific spot, herbs have to have their own real estate and vegetables have their own location as well. But that is not true! In your flower beds, mix and match amongst your flowers some herbs or vegetables. Consider using your trellis for climbers such as beans, peas. Edible landscaping can also be incorporated into flower pots. Consider planting a tomato plant with a low growing flowering plant. If you are new at this ask the specialists at Parkland Garden Centre which flowers will work best with a vegetable or herb plant.

Things to consider while creating an edible landscape:

1. **Start small** - try a few potato plants, carrots, or only herbs that you know you will use.
2. **Choose appropriate sites** - food plants need sunny locations for you to benefit from their nutritional content.

3. **Plant competition** - non compatible plants, remember larger plants such as a shrub can take away most of the water and nutrients in the soil, leaving smaller plants struggling. Make sure you have a water source, or hose, that can reach them.

4. **Wildlife** - birds and animals will be attracted to your edible landscape. If you plant a berry bush in your front flower bed for pies, keep in mind the City of Red Deer is home to many deer, that may wander up to your flower beds and thank you for the open buffet.

5. **Trade-offs** - if you were used to spraying your garden for pests, your spray may kill your other flowering plants. As mentioned earlier, pest control should be under control, as they will not be able to find your strawberry plant amongst your marigolds.

6. **Know what you are growing** - if you are adventurous and want to try other edible plants (other than fruits and vegetables), know what they are and how to prepare. Only eat a small amount as issues such as an allergic reaction could be the outcome.

There are many books, which Parkland carries, to help you with your edible landscaping, do your research. If you are still uncertain how to incorporate a few potatoes, carrots, herbs into your flower beds, the specialists at Parkland Garden Centre will be more than happy to assist you.

Flat Tire Decor designs, develops, and markets unique and innovative products from tires that have reached the end of the road. But as you can see, these re-inspired tires still have plenty of mileage left in them. With a little creativity and concern for the environment, these tires are getting a shot at a repeat performance.

Panini sandwiches hot pressed from the grill pan, or grilled vegetables in olive oil over low heat, all are delicious!

Xeriscape

While not a completely new topic, it has become something very relevant to us in our ecologically minded society. When most people start talking about this subject they automatically think plants that don't require water. Xeriscape is about more than just water wise gardening. There are many components to correctly turning your yard into a biologically diverse Xeriscape yard; for example, mulching, and drought tolerant plants. Please call Serena at 403-346-5613 for information!
